## ACOUSTIC ENERGY

Three years in the making, the Radiance Series loudspeakers have been designed from the ground up - utilising the latest technologies to offer the finest possible sound.

Whether you choose dedicated stereo listening or prefer to re-create the thrills and spills of your favourite movie soundtracks - all Radiance models are more than capable of delivering the sonic fireworks.

To fit in with the modern home environment only the highest quality, hand-selected wood veneers have been used - in conjunction with high-grade, cast-aluminium metalwork. The Radiance Series loudspeakers are items of furniture to be proud of.

### Technology

The Radiance Series offer some of the most cutting-edge developments currently available in loudspeaker technology:

**DXT. Lens** - the tweeter (high-frequency driver) mounting incorporates this waveguide to adjust dispersion to match that of the mid/bass driver. The result being more natural sound in-room.

**Aluminium drivers** with dual-wound aluminium voice-coils. Heat creates distortion in loudspeaker drivers - we dissipate as much heat as possible through our cone assembly meaning you can listen louder, for longer.

**Curved cabinet construction** - Minimising harmful standing waves and vibration through the enclosure. This means lower colouration, more natural sound.
