PRODUCT INFORMATION

PASSION CDT450 CD TRANSPORT

This product is a CD transport only, meaning it does not have an on-board DAC.

Whilst it can be partnered with any good DAC, the CDT450 is designed ideally to be used with either the Passion PRE550A preamplifier/DAC or the Passion IA350A integrated amplifier.

The top loading transport features a High end Phillips CD PRO II with patented Blue Diode[®] system.

Loading the CD is carried out via a sliding door which should remain partially open during playback in order to minimize vibration due to the movement of the air rotation of the disc.

Once the disc is placed on the platter and the clamp put in place, it is necessary only to slide the door forward by 2 cm to start playing.

The CDT450 has the advantage of SRC (sample rate conversion) – this feature being available only through the I²S output. The transport has five available outputs – all digital. Full control is available from the switches on the front panel or the remote control.

SPECIFICATIONS

CD Server	High end Phillips CD PRO II with patented Blue diode [®] system
Drive Compatibility	CD CD-R CD-RW
Audio Outputs	I ² S, Coaxial, AES/EBU, BNC, Optical
Upsampling	SRC upsampling 96, 192 kHz/24bit
Power Supply	Linear power supply with high performance R-Core transformer
Finish	Natural aluminium
Remote control	Yes
Dimensions (w x d x h)	430 mm x 388 mm x 118 mm
Weight	10.8 Kg
